Introduction

SecuriSens d-LIST heat detectors, where all other detectors reach their limits.

Dust, heat, smoke, exhaust fumes and other interference factors have a significant impact on detecting fires when using conventional fire detectors. However, it is exactly under such difficult conditions that the fire risk is so great and it is vital to ensure quick and reliable detection – such as in tunnels, industrial facilities, power plants and car parks.

With the SecuriSens d-LIST line-type heat detectors, Securiton provides systems that can enable the rapid localisation of a fire – even when used in harsh, aggressive environments.

Safety in industrial facilities – the SecuriSens d-LIST.

The SecuriSens d-LIST line-type heat detector with SEC 15 sensor cable is ideally suited to applications with small monitoring areas. Two sensor cables with a maximum length of 250 metres each can be connected to the SCU 800 (sensor control unit) and put into operation at the touch of a button – and all without special aids or advance knowledge of the system. The monitoring system with a maximum of two sets of 99 sensors can be universally integrated in fire alarm systems and also offers mobile application possibilities. Several SCU 800 units can be networked easily for monitoring larger areas. The d-LIST system can also be expanded with individual temperature sensors in metal housings for monitoring critical areas such as drive units on conveyor belts and escalators, among others.

Outstanding flexibility – because every object needs individual protection.

The spacing between sensors can be freely selected, and it is even possible to combine different sensor spacing distances. You can see where the sensors are located according to the markings on the outer sheathing of the sensor cable. Another highlight (and one that is absolutely unique on the market) is the problem-free branching of the cable harnesses. External individual sensors in metal housings are available for special applications and can be easily connected to the SecuriSens d-LIST system. Different sensor cable areas can be connected together with one signal cable.

Product

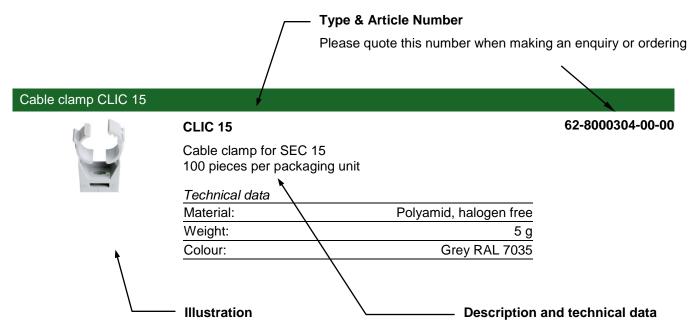

The descriptions and technical data included in this catalogue are up-to-date at the time of release. We reserve the right to make alterations to them, particularly where justified by technological advancements. The illustrated products may also differ visually from the products supplied as a result of continuous further development of products.

The layout of this catalogue is subject to copyright. The copying or reuse of text, illustrations and photos in any media (e.g. print, CD-ROM, Internet, etc.) contained within this catalogue - also in an abridged form - is only allowed with our explicit written permission. We assume no liability for typographic errors and obvious mistakes. Please quote the relevant item numbers when making enquiries or placing an order.

Delivery conditions are regulated in the "General Terms and Conditions of Securiton AG for Export Deliveries"

How to read the catalogue

Example of a typical entry for an item

1. Processor Units

Sensor Control Unit

SCU 800-03

SCU 800/16

The sensor control unit SCU 800 is the central supervisory element for the d-LIST-system.

It provides up to two d-LIST sensor cables with power, performs the cyclic addressing of the connected sensors every 10 seconds, acquires the temperature values measured by each sensor and evaluates the data with reference to various criteria.

A fire alarm is generated if either a given maximum threshold is exceeded, or if an increase in temperature takes place within a certain time (differential evaluation). The two thresholds (set-points) can be set individually for each of the attached sensor cables.

The measurement resolution of 0,1° gives the system a high sensitivity. The tried and tested algorithms used in the evaluation eliminate false alarms due to natural temperature variations.

Technical data

48 VDC / 32 VAC max.
250 mA max.
VDC reset input, galvanically isolated
temperature: -10°C +60°C
21 – 29 VDC
1 – 29 VDC
260 x 150 x 90 mm
aluminium
SCU800-03: 1,9 Kg
SCU800/16: 2,3 Kg
SCU800-03:
2 relays (1 per cable)
SCU800/16:
16 zonal relays

Stainless steel cable tie		
	FECT 201-A4	62-8000360-00-00
	Protection for MDJ clamp and line mounting fastener in the event of a fire	
Connection Cable		
	CC 15	62-8000345-00-00
	LISTEC supply cable 1x2x0.8, shielded, JE-H(ST)H E30, for an SEC 15 sensor cable. If it is not possible to connect the sensor cable directly to the sensor control unit SCU800, the connection cable CC15 can connect sensor control unit and sensor cable via the connection box.	

62-2000300-00-00

Connection Box

CBO 5-SEC

Connection unit for one or two temperature sensor cable SEC15 including an universal connection module UCM. If it is not possible to connect the sensor cable directly to the sensor control unit SCU800, the connection cable CC15 can connect sensor control unit and sensor cable via the connection box. In the box the connection cable and the sensor cable are linked together via the connection module UCM. If short transmission lines are linked the universal connection module has the possibility to activate adaptation resistors.

Connection Box

CBO 5-ESD-T

Connection unit for up to eight external sensors ESD or four single sensors and one LIST-cable SEC15. The external sensors can be connected to the SEC15 sensor cable bus via the connection box. It is possible to connect up to eight single sensors to the bus or four sensors and a sensor cable. Every connection has an adaption resistance. This can be activated, if needed, for example for short adaptation resistors.

Optical Input Module		
	OIM 15	62-4000208-00-00
	The Optical Input Module OIM15 provides an interface from external switches to the d-LIST-System. It is possible to record and evaluate input information at the same time in one measurement cycle. Each OIM-Module has 4 inputs to use. These inputs are isolated via optical couplers from the SEC15-system. An external voltage is necessary to activate the optical couplers. → Please order firmware ES8D1 OIM with it. <u>Technical data</u> Inputs: Electrical switches on internal terminal blocks, galvanically isolated via optical couplers <u>Operating voltage: 24V DC</u> Switching voltage: 18V 31.9V DC, <18V with different line resistor <u>Operating temperature: 0°C +40°C</u> <u>Dimensions(LxWxH): 68mm x 82mm x 40mm</u> <u>Weight: 0.076 kg</u> Installation: rail mounted
