 **SECURITON**  
For your safety

## Welcome to the safe side

### Relax – we're with you all the way.

**Security professionals want a strong partner. A partner they can trust whatever happens – especially when the going gets tough. A collaboration with Securiton fits the bill perfectly: the**

**combination of personal consultations, unmatched technical know-how and proximity of our services means all you have to do is relax. Welcome to the safe side.**

### **From a single module to the all-inclusive solution.**

When it comes to reliable security solutions, every building and every company is different. While some situations require only a component upgrade to guarantee optimal protection, others call for all-inclusive security concepts. Whatever your needs, Securiton has the appropriate solution. And at attractive conditions.

### **Always there for you.**

Durable, dependable, professional, always technically up-to-date – that sums up our security technology. It applies to our customer relations as well. You benefit from fast and easy access to our widespread service and consulting network. The day-to-day dealings we enjoy with our customers are the reason why we're successful.

### **Securiton's complete solutions comprise the following modules:**

- needs analyses
- designs
- customised solutions
- turnkey installations
- system commissioning
- servicing

## Pioneering spirit

### Adaptable in structure, unwavering in emergencies.

**It's no coincidence that Securiton is a leading supplier of alarm and security systems. Our complete solutions and modules incorporate decades of research and development knowledge, as well as**

**the experience gained from thousands of installed systems. You also benefit from the commitment of highly motivated staff who go the extra mile to find the best solution.**

### A tradition of innovation.

Securiton has been committed to customer security since 1948. Those early days of relay technology have now become today's computer-controlled alarm and security systems. This progress is characterised by a pioneering spirit that our people carry forward every day – witness our numerous inventions and patents, which are in successful use the world over. And because Securiton develops and produces its devices and systems in-house, products can be flexibly adapted to customers' specific needs at any time.

### Embedded in the Swiss Securitas Group.

Securiton forms part of the Swiss Securitas Group's Alarm and Security Systems division. The group comprises 21 companies and almost 8000 employees, all working for your security in Switzerland, Europe and throughout the world. Vital synergies are available to Securiton and its customers thanks to the dynamic exchange between group companies, resulting in comprehensive, one-stop security solutions.

### Securiton has a broad range of alarm and security systems for:

- intrusion and hold-up alarming
- fire detection
- video surveillance
- access control and time recording
- complete systems
- property protection
- protection of persons

## Highest safety standards

### Breathing easy – thanks to sophisticated intrusion and hold-up alarming.

**A secure environment is a must for positive energies to develop. Securiton's intrusion and hold-up detection systems ensure your confidence is well founded. Whether you're in your private sphere or at work, dependable detection and alarm systems reinforce your sense of security.**

#### **Prevention is better than cure.**

Every burglary, every hold-up has its own story. One that's unpleasant for all concerned. Securiton is fully dedicated to preventing incidents of this kind: our continual quest for better solutions has helped us perfect our automatic intrusion and hold-up detection systems. Deploying them will cut your losses considerably.

We offer our customers highly effective systems to suit every need and every budget. They are easy to operate, sabotage-proof and employ state-of-the-art technology.

#### **Complete protection.**

Our systems and components – the majority of which we develop and produce ourselves – are as diverse as your

security needs. We design, install and service detection systems for rooms, the outer skins of buildings and outside areas. We also protect your employees by using discreetly installed hold-up alarm buttons and personnel protection systems. And of course all our detection systems can be connected to an alarm-receiving control centre.

#### **Securiton intrusion detector systems offer the following benefits:**

- easy operation
- wide range of applications
- dependable operation at all times (e.g. in the event of a power failure)
- wireless operation by radio if desired
- highly cost effective thanks to modular architecture
- easy integration of existing components
- highest safety standards

## Leading-edge technology

### Taking it easy – thanks to reliable fire detection.

**When it comes to safety, you don't play with fire. Which is why Securiton offers totally reliable fire detector systems for any kind of environment – from hotel rooms to industrial warehouses and road tunnels. Leading-edge technology, superior know-how and our in-depth experience all combine to prevent damage by fire. Around the clock.**

#### **Alert around the clock: fire detectors and fire detector systems.**

Reliable fire detection begins with point-type detectors. In use around the world, these fire detectors owe their success to sophisticated detection and transmission technology, not to mention their low running costs. Extreme precision starts with deploying the right type of detector for the situation – types range from smoke and heat detectors to scattered-light smoke detectors and universal temperature detectors with rate-of-rise and maximum measurement. This enables every room to be reliably monitored using the appropriate detector.

Leading-edge fire detector systems from Securiton carefully evaluate detector signals and forward them immediately to the right address.

#### **Limitless security: special fire detectors.**

Where conventional point-type detectors are not suitable, Securiton's special fire detectors come to the rescue. You can rely on them completely even under the

most difficult conditions: they selectively ignore heat, cold, soot and moisture and accurately report only the essential events. Special detectors are used in tunnels, cold stores, laboratories, museums, computer centres, and so on. The ability to connect them to overall systems optimises their effectiveness and ease of use.

#### **Intelligent fire detector systems:**

- easy operation
- wireless operation by radio if desired
- remote diagnosis and remote control
- false alarms are virtually ruled out
- applications: from the home to chemical warehouses
- the right fire detector type for every room
- the technology meets the stringent requirements of insurance companies

#### **Special fire detectors – sophisticated technology in action:**

- temperature sensor cable: sensors detect and report temperature increases lightning fast
- linear heat detectors: register rapidly spreading warm air
- linear infrared fire detectors: register disturbances of the infrared beam due to heat or smoke
- smoke aspiration systems: analyse aspirated air for smoke particles
- video surveillance: digital picture evaluation for fire and smoke

## Maximum transparency

### Trusting – thanks to video surveillance and sophisticated access controls.

**Clear relationships increase actual security and boost the subjective feeling of security. Securiton's video surveillance systems – whether monitoring large areas or specific points – ensure maximum transparency. You feel good when you know you've placed your trust in the right people. Access control systems allow you to give trusted persons access to sensitive or valuable objects and spaces, while preventing entry to unwanted visitors.**

#### **Security through transparency: CCTV video surveillance.**

It's easy being wise after the event – but it's cleverer to prevent the event happening in the first place. Use of CCTV (closed-circuit television) detects hold-ups, burglaries, vandalism and fires in their early stages. They can then be countered rapidly and effectively. CCTV ensures a high level of security for homes, businesses and public spaces. Technologically, video surveillance systems are developing incredibly fast. Even small customers can now benefit from picture and evaluation quality that

was unthinkable just a few years ago. Digital CCTV systems can be operated by remote control and easily integrated into an overall system.

#### **When doors need to think: access control systems.**

Your employees and assets – research results, data, company equipment – are too valuable simply to be offered on a plate to unwanted visitors. Securiton's access control systems let you define who has access to what areas and when.

The modular design of our systems means that you get as much protection as you need and as little as you can get away with. The technological possibilities for identifying those with access rights are virtually limitless. And your access controls gain in efficacy when linked in to other systems such as time recording, video surveillance or your existing facilities.

#### **Where CCTV systems provide a clear view:**

- companies/organisations: lobbies, side entrances, highly sensitive areas, outside spaces
- public realm: museums, stadiums, railway stations, tunnels, car parks, airports
- private sphere: driveways, entrances (main, side and cellar), highly sensitive areas

#### **The benefits of access control systems:**

- modular: tailored to your needs
- flexible: easy to adapt
- versatile: card-making and card-programming, various identification methods, journal function;
- combinable (e.g. with CCTV), can be integrated into overall systems
- transparent and straightforward: visually and functionally user-friendly; connect to existing data systems
- cost-effective: high investment security, low running costs

## Perfect oversight

### Remaining alert – thanks to seamless total systems and comprehensive property protection.

**Where all the threads meet, that's where you need a strong knot. Our security management systems constitute the central nervous system of any kind of security system. They log everything that happens in your business and enable you to effect rapid, target-driven interventions. Securiton is your expert partner when it comes to protecting your physical assets. Wherever you want to safeguard your property, whether small or large – we're there for you.**

#### **The essence of security: perfect oversight thanks to security management systems.**

All our alarm and security systems are connected to the security management system. One or more monitors display every status and event in detail. If a threat develops somewhere in your business, the system automatically triggers an alarm. The source of the threat is found in seconds and you're given precise instructions as to how to deal with it. A couple of clicks of the mouse, and you've initiated an intervention that could prevent a loss running into the millions.

Securiton's security management systems are in successful use worldwide.

#### **Mobile, flexible, high-density property protection.**

If yours is a particularly sensitive line of business, you need to know who you're dealing with. Securiton's property protection secures buildings and entire areas against unwanted ingress. Advanced detectors register the slightest movement and transmit events to the primary control unit – around the clock, whatever the weather. You define the protection zones with our specialists.

Our choice of technical components can easily be adapted to your specific property and needs – you always end up with the most appropriate combination. And our temporary property protection system is particularly impressive: it sets up fast, operates reliably, and dismantles in a flash.

#### **Security management systems network, integrate and manage the following facilities:**

- fire detector systems
- intrusion detector systems
- access controls
- video surveillance
- building control technology
- information and communication technology
- production and logistics units
- entire automation systems

#### **Property protection at work:**

- military, border security, police
- government offices
- embassies and consulates
- international organisations, conferences, VIP events
- trade fairs
- museums
- major construction sites
- communication, power, commercial and transportation companies

## A better quality of life

### Enjoying life – thanks to our strong security package for homes and SMEs.

**Some say we're the product of our environment. The more secure this environment, the more space it allows us for realising our dreams. With Securiton's security package, you can rest easy in the knowledge that threats, wherever they come from, stay firmly on the outside. So you can concentrate on the things that mean most to you.**

#### **Lean times for bad intentions thanks to professional security technology.**

Securiton's security package for homes and SMEs safeguards your home or business from a whole series of threats. It catches burglars and vandals in the act, detects incipient fires, and warns of impending water damage. From state-of-the-art smoke and motion detectors to break-glass, vibration and seismic detectors, every unusual event is automatically transmitted to the alarm receiver, where appropriate intervention is triggered.

#### **As individual as your living space: customised security.**

You don't buy off-the-shelf with Securiton – your custom security package is the result of detailed discussions and clarifications. It's the solution to your security needs and to defined threats, and is technically and financially viable. Professional security is now affordable, even for limited budgets.

#### **An unbeatable duo: Securiton and Securitas.**

Two market leaders, dedicated to ensuring your security. While Securiton builds your custom security package and installs and maintains your systems, Securitas provides the specialists who man the alarm receiver control centres and intervention services. You profit from the cumulative know-how of two Securitas Group companies.

#### **Your security package includes:**

- individual consultation and weak-point analysis
- planning and security design
- complete installation of all components
- testing and maintenance
- around-the-clock alarm reception
- intervention in the event of an alarm
